October 2017

408 propiconazole

Dear Colleague,

This is to inform you that Syngenta Crop Protection AG is planning to organise a full scale collaborative trial on a method for propiconazole.

Principle: The content of propiconazole in the formulations is determined by gas chromatography on a DB-5 or equivalent fused silica column, 15 m length, 0.32 mm i.d., 1.0 µm film thickness, using hydrogen as carrier gas and flame ionization detection. Quantitation is done by internal standard calibration.

Scope: It is intended to analyse four samples i.e. two technical material (TC) and two emulsifiable concentrate (EC) samples. Samples, analytical standard and internal standard will be provided.

Time schedule: The collaborative trial is intended to be carried out between December 2017- March 2018. Those who wish to participate should contact the organiser by 25 November 2017. The results should be reported by the end of March 2018.

Further information: The trial is limited to 20 participating laboratories due to the availability of samples. The selection criterion is "first come, first served".

Contact:

Mr Christian Mink
