February 2022

XXX Isocycloseram

Dear Colleague,

This is to inform you that Syngenta Crop Protection AG is planning to organise a full-scale collaborative trial on a method for isocycloseram.

Principle: The content of isocycloseram in the formulations is determined by reversed phase high performance liquid chromatography on a stainless steel, 100 x 4.6 mm (i.d.) Kinetex C18, 2.6 µm column (or equivalent with the same selectivity), with mobile phase composed of acetonitrile/water (0.1% v/v formic acid) and UV detection at 265 nm. Quantitation is done by external standard calibration.

Scope: It is intended to analyse five samples consisting of two technical concentrates (TK) and three water dispersible powders (WP). Samples and analytical standard will be provided.

Time schedule: The collaborative trial is intended to be carried out between November 2022 and February 2023. Those who wish to participate should contact the organiser by November 7th, 2022. The results should be reported by the end of February 2023.

Note: The trial is limited to 20 participating laboratories due to the availability of samples. The selection is based on the application order.

Contact:
Mr Christian Mink
Syngenta Crop Protection AG
