356. *d*-phenothrin

Dear Member,

This is to inform you that JAPAC is planning to organize a collaborative trial on a method for *d*-phenothrin.

Principle. The content of *d*-phenothrin is determined by capillary GC (column 0.25mm ID x 30m, coated with a 0.25µm film of crosslinked 50% phenyl 50% dimethyl polysiloxane e.g. DB-17) using split injection, flame ionisation detector and *m*-terphenyl as internal standard.

Scope. It is intended to analyze five samples consisting of two technicals and three liquid phases of aerosol. *d*-Phenothrin analytical standard will be supplied.

Time schedule. The collaborative trial is intended to be carried out during October 2003 - January 2004.

Those who wish to participate should contact the organizer by 31 August 2003.

Participants who perform the trial together with 743 prallethrin would be welcomed.
