18 September 2007

35. fenitrothion

This is to inform you that JAPAC is planning to organize a collaborative trial on a method for fenitrothion.

Principle. The content of fenitrothion is determined by normal phase high performance liquid chromatography on a 250 x 4.6 mm CN column (Zorbax CN, or equivalent) with mobile phase composed of *n*-heptane/1-butanol, 100/1 (v/v) and UV detection at 268 nm. Quantification is done by external standardization.

Scope. It is intended to analyze six samples consisting of one technical material, one WP, two EC and two UL formulations. Fenitrothion analytical standard will be supplied.

Time schedule. The collaborative trial is intended to be carried out during October 2007 - January 2008.

Those who wish to participate should contact the organizer by 30th September 2007.

Contact:

Mr. Yasushi Asada
