612. indoxacarb

This is to inform you that DuPont Crop Protection is planning to organize a collaborative trial on a method for indoxacarb.

Principle. The indoxacarb content is determined by normal phase HPLC using a 250 mm x 4.6 mm (i.d.) Chiralcel-OD column, or equivalent with the same selectivity, with mobile phase composed of hexane and 2-propanol (75/25, v/v) and UV detection at 310 nm. Quantification is done by external standardization.

Scope. It is intended to analyze five samples consisting of two technical materials (a TC and a TK) and three formulations (30 WG, 150 EC, and 150 SC). Samples and indoxacarb analytical standard will be supplied. If requested, the column will be supplied (up to a maximum of 15).

Time schedule. The collaborative trial is intended to be carried out during January 2008 – first week of March 2008.

Those who wish to participate should contact the organizer by 20th November 2007.
