30 January 2008

511. cyprodinil

This is to inform you that Syngenta is planning to organize a collaborative trial on a method for cyprodinil.

Principle. The cyprodinil content is determined by reversed-phase HPLC using a 250 mm x 4.0 mm (i.d.), Nucleosil C18 column, 5 µm particle size, (or equivalent, with the same selectivity), with mobile phase composed of acetonitrile and acidified water and UV detection at 254 nm. Quantification is done by external standardization.

Scope It is intended to analyze five samples consisting of two technical materials, two WP formulations and one EC formulation. Samples and cyprodinil analytical standard will be supplied.

Time schedule. The collaborative trial is intended to be carried out during March – April 2008. Those who wish to participate should contact the organizer by 15th February 2008.

Contact:
